RESULT 15

US-10-330-613A-57

Sequence 57, Application US/10330613A
Patent No. 6924360

GENERAL INFORMATION:
PAPELICANT: Gudas, Jean
TITLE OF INVERTION: ANTIBODIES AGAINST THE MUC18 ANTIGEN
FILE REFERENCE: ABGENIX.022A

CURRENT FILING DATE: 2002-12-26

PRIOR PELING DATE: 2001-12-18

FRIOR FILING DATE: 2001-12-18

SOSTWARE: FastSEQ for Windows Version 4.0

SOSTWARE: FAST OF MURCHEN CONSTRUCTORS: SEQ ID NO 57

LENGTH: 99

TYPE: PT

CONGANISM: Homo sapiens

```
binding polypeptides and their encoding polymucleotides. The invention is useful for treating TNF-alpha mediated disease such as sepsis, an automame disease, theumatory diseases, an automame disease, malignant pathologies involving TNF-secreting tumours, alcohol-induced hepatitis, inflammatory diseases, natured according to tumours, alcohol-induced hepatitis, psoriasis, psoriatic arthitis, wegener; s granulomatosis, anxivosing spondylitis, heart failure, reperfusion injury, chronic obstructive pulmonary disease, pulmonary of fibrosis, hepatitis C infection, Kawasaki's pathology, Refsum's disease, cataxia, telangisctasia, Alzheimer's disease, pown's syndrome, Parkinson's disease, leukaemias (acute, chronic myelocytic, chronic lymphocytic and/or myelodyspastic syndrome). Iymphomas (Hodgkin's, non-Hodgkin's and Surkitt's syndrome), hypokinetic movement disorders, crohn's disease, ulcerative colitis, amyotrophic convenent disorders, crohn's disease, ulcerative colitis, amyotrophic collectes, multiple sclerosis, Grave's disease, diabetes collitis, and infectious diseases. The invention is also useful in antibody therapy. The present sequence is human hul framework sub-region of heavy chain variable (VH) cregion (FRH) peptide. This sequence is used in the invention.
                                                                                                                                                                                                                              present invention relates to tumour necrosis factor alpha (TNF-alpha)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           TWF-alpha binding; complementarity determining region; CDR; TWF-alpha; immunoassay; CDRL-3; CDRH-3; sepsis; autoimmune disease; rheumatoid arthritis; allergy; multiple sclerosis; systemic lupus erythematosus; scleroderma; diabetes mellitus; cachexia; parasitic disease; infectious disease; sarcoidosis; inflammatory bowel disease; ulcerative colitis; Crohn's disease; disease; barkinson's disease; Alzheimer, s disease; Down's syndrome; psoriasis; ankylosing spondylitis; Wegener's granulomatosis; idiopathic pulmonary fibrosis; asthma; graft-versus-host disease; leukemia; human.
binding molecule, useful for treating a TNF-alpha mediated disease such as sepsis, an autoimmune disease, rheumatoid arthritis, and neurodegenerative diseases.

The invention relates to a composition which comprises a TNP-alpha binding molecule having sequence of complementarity determining region (CDRJ) in 1944t chain variable region (CDRJ) and sequence of CDR in composition is useful in the neavy chain variable region (CDRJ). 3 and sequence of CDR in chart chain variable region (CDRJ). The composition is useful in the treatment of TNP-alpha mediated diseases. TNP-alpha binding molecule is useful for treating sepsis, autoimmune disease, rhematoola arthritis, allery, multiple sclerosis, systemic lupus erythematosus, scleroderma, diabetes mellitus, cachexia, acute and chronic parasitic and/or infectious diseases, sarcoidosis, inflammatory bowel disease, ulcerative colitis, Crohn's disease, diseaninated intravascular coagulation, parkinson's disease, Alzheimer's disease, Down's syndrome, psorlasis, anthony spondylitis, Wegener's granulomatosis, idiopathic pulmonary fibrosis, asthma, graft-versus-host disease, or leukemia. TNF-alpha binding molecule is useful in diagnostic methods for detecting TNF-alpha in parients known to be or suspected of having TNF-alpha-mediated disease. TNF-alpha binding molecule is useful in immunoassays for epresents the amino acid sequence of a human heavy chain framework
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        antibody; antigen binding fragment; cell culture; variable domain; modified framework region; hypervariable region; cytostatic; antiinflammatory; antiangiogenic; immunomodulatory; antibody therapy; tumour; inflammatory disorder; angiogenic disorder; immunological disorder; anti-VBGF antibody; antibody; heavy chain; FR1. anti vascular endothelial cell growth factor antibody;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

New library of nucleic acid sequences comprises nucleotide sequences encoding humanized heavy chain variable regions and humanized light chain variable regions, useful for producing humanized antibodies.

WPI; 2005-180802/19.

Disclosure; SEQ ID NO 339; 179pp; English

The invention comprises a library of nucleotide sequences encoding humanized antibody heavy chain variable regions and humanized antibody light chain variable regions. The library of the invention is useful for producing humanized antibodies, or for re-engineering or reshaping an antibody from a first species for use in a second species. The present amino acid sequence represents a human germline heavy chain framework

Human antibody heavy chain framework peptide - SEQ ID 363.

(first entry)

05-MAY-2005

ADY31531;

```
antigen binding fragment in high yield in a cell culture. The method comprises expressing a variable domain of the antibody or antigen binding fragment comprises expressing a variable domain of the antibody or antigen binding fragment comprising a modified framework region (FR) in a host cell, and recovering the antibody or antigen binding fragment variable domain comprising the modified framework from the host cell. The modified FR in the method described above has a substitution of at least one amino acid the method described above has a substitution of at least one amino acid position with a different amino acid, where the different amino acid is the amino acid found at the corresponding FR position of a human subgroup (FVRI) and/or HVR2 amino acid sequence that has a hypervariable region. It (HVRI) and/or HVR2 amino acid sequence of the variable domain.

CHARI) and/or HVR2 amino acid sequence of the variable domain.

CHARI) and/or antigen binding fragment variable domain.

CHARI) and/or antigen binding fragment. The antibody and antigen binding fragment. The antibody and antigen binding fragments in antibody and antigen immunomodulatory activities, and can be used in antibody therapy. The methods and compositions of the present invention are useful for methods and compositions of the present invention are useful for the previous or antifered antifoning fragments in cell culture, in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         particular for improving the yield of recombinant antibodies or antigen binding fragments in cell culture. The antibodies of the invention can be used to diagnose, treat, inhibit or prevent e.g. tumours and inflammatory, andjogenic and immunological disorders. The present sequence represents a heavy chain FR1 peptide of an anti-VEGF (vascular endothelial cell growth factor) antibody, which is used in the exemplification of the present invention.
                                                                          Producing an antibody or antigen binding fragment in high yield in a cell culture, comprises expressing a variable domain with a modified framework region in a host cell.
                                                                                                                                                                                                                                                                                                                                                                   present invention describes a method for producing an antibody or

New library of nucleic acid sequences comprises nucleotide sequences encoding humanized heavy chain variable regions and humanized light chain variable regions, useful for producing humanized antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention comprises a library of nuclectide sequences encoding humanized antibody heavy chain variable regions and humanized antibody light chain variable regions. The library of the invention is useful for producing humanized antibodies, or for re-engineering or reshaping an antibody from a first species for use in a second species. The present amino acid sequence represents a human germline heavy chain framework

New library of nucleic acid sequences comprises nucleotide sequences encoding humanized heavy chain variable regions and humanized light chain variable regions, useful for producing humanized antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                       The invention comprises a library of nucleotide sequences encoding humanized antibody heavy chain variable regions and humanized antibody light chain variable regions. The library of the invention is useful for producing humanized antibodies, or for re-engineering or reshaping an antibody from a first species for use in a second species. The present amino acid sequence represents a human germline heavy chain framework
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DNA library; humanized antibody; antibody engineering; heavy chain.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New library of nucleic acid sequences comprises nucleotide sequences encoding humanized heavy chain variable regions and humanized light chain variable regions, useful for producing humanized antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention comprises a library of nucleotide sequences encoding humanized antibody heavy chain variable regions and humanized antibody light chain variable regions. The library of the invention is useful for producing humanized antibodies, or for re-engineering or reshaping an antibody from a first species for use in a second species. The present amino acid sequence represents a human germline heavy chain framework

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New library of nucleic acid sequences comprises nucleotide sequences encoding humanized heavy chain variable regions and humanized light chain variable regions, useful for producing humanized antibodies.
New library of nucleic acid sequences comprises nucleotide sequences encoding humanized heavy chain variable regions and humanized light chain variable regions, useful for producing humanized antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention comprises a library of nucleotide sequences encoding humanized antibody heavy chain variable regions and humanized antibody light chain variable regions. The library of the invention is useful for producing humanized antibodies, or for re-engineering or reshaping an antibody from a first species for use in a second species. The present amino acid sequence represents a human germline heavy chain framework

The library of the invention is useful for producing humanized antibodies, or for re-engineering or reshaping an antibody from a first species for use in a second species. The present amino acid sequence represents a human germline heavy chain framework
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                           Gaps

New library of nucleic acid sequences comprises nucleotide sequences encoding humanized heavy chain variable regions and humanized light chain variable regions, useful for producing humanized antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention comprises a library of nuclectide sequences encoding humanized antibody heavy chain variable regions and humanized antibody light chain variable regions. The library of the invention is useful for producing humanized antibodies, or for re-engineering or reshaping an antibody from a first species for use in a second species. The present amino acid sequence represents a human germline heavy chain framework
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                           DNA library; humanized antibody; antibody engineering; heavy chain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  antibody; heavy chain; pharmaceutical; peripheral neuropathy; central nervous system disease; neurodegenerative disease; Alzheimers disease; Parkinsons disease; motor neurone disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Length 25;
                                                                                                                                                                                                                                                                 Human antibody heavy chain framework peptide - SEQ ID 372.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Indels

RESULT 12

```
The invention relates to binding molecules (SEQ ID Nos 2 and 3) capable of binding to human NgGA polypeptide (SEQ ID No: 5), human NiG cof binding to human NGGA polypeptide (SEQ ID NO: 7), human NiG-D20 polypeptide (SEQ ID NO: 24), or human NGGA342-357 (SEQ ID NO: 6) all given in the specification, with a dissociation comprises a first antigen binding site comprising in sequence the hypervariable regions CDR-H1, CDR-H2, and CDR-H3, where each of the hypervariable regions CDR-H1, CDR-H2, and CDR-H3, where each of the hypervariable regions CDR-H1, CDR-L3, where each of the hypervariable regions CDR-H1, DAG (SEQ ID NO: 10) all given in the specification, and a second antigen binding site comprising in sequence the hypervariable comprises of the normal sequence (SEQ ID NO: 12), and CDR-H1-3A6 (SEQ ID NO: 10) all given in the specification, and a second antigen binding site comprising in sequence the hypervariable cregions are at least 50% homologous to their equivalent hypervariable cregions are at least 50% homologous to their equivalent hypervariable cregions are at least 50% homologous to their equivalent hypervariable cregions are at least 50% homologous to their equivalent hypervariable cregions are at least 50% homologous to their equivalent hypervariable cregions are at least 50% homologous to their equivalent hypervariable cregions are: (i) polymucleotide sequences encoding the binding molecules above, (ii) polymucleotide sequences encoding the binding molecules above, (ii) polymucleotide sequences encoding the binding molecule in association system or its part is present in a compatible host cell comprising the expression system or its part is present in a compatible host cell comprising the expression system or its part is present in a compatible host cell comprising the expression system or its part is present in a compatible host cell comprising the expression system or its part is present in a compatible of province of nerve repair. They are also useful in the treatment of various cell seases as for th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          retinopathy, age-related macular degeneration, or pathologic myopia. This sequence represents the N-terminal sequence of the heavy chain of mouse 3A6 antibody as determined by sequence degradation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New binding molecule capable of binding to human NogoA polypeptide, human NiG-D20, or human NogoA342-357, useful for treating nerve repair, Alzheimer's disease, Parkinson's disease, or amyotrophic lateral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 neurodegenerative diseases including Alzheimer's disease, Parkinson's
disease, or amyotrophic lateral sclerosis. The binding molecules amy also
be used for treating degenerative ocular disorders including diabetic
ocular disease; diabetic retinopathy; age related macular degeneration;
                     myopia, cns-gen, neuroprotective, nootropic, antiparkinsonian,
antidiabetic, ophthalmological; 3A6.

framework

Pramework regions (AAR87049-52) of human group III (gp3) germ line antibody heavy chain showed homology to corresponding regions (AAR87053-56, respectively) of the rat anti-human interleukin-5 monoclonal antibody 39D10 heavy chain (see AAR87039). This homology was utilised in the prodn. of a humanised 39D10 VH (AAR87058) in which rat 39D10 VH complementarity determining regions were grafted into the human gp3

Anti-human IL-5 recombinant antibody - useful for preventing or reducing eosinophilia and for treating certain allergic diseases, esp. asthma.

The invention relates to a novel method for preparing an antibody with a cheavy and light chain comprising fermenting a cell mixture, where the calls are capable of expressing the light and heavy chain, separating the cells are capable of expressing the light and heavy chain, separating the cells from the supernatant to form a cell pellet, allowing the pellet to stand for a hold time, extracting the cell pellet and producing the pellet to common the cell pellet and producing the TNF common necrosis factor) alpha antibody fragment or its dimer or adduct. The antibody of the invention demonstrates antiarthritic, antirheumatic, gastrointestinal-gen. and antiinflammatory activities and may be useful compacted to the treatment of rheumatoid arthritis or an inflammatory bowel disease, such as crohn's disease. Currently used anti-TNF-alpha monoclonal.

CC antibodies, such as infliximab and etanercept, have limited success in the treatment of disease since they must be administered frequently or intravenously. Furthermore, both of these molecules comprise large contraints and as such are difficult and expensive to manufacture. The proteins and as such are difficult and expensive to manufacture. The current sequence is that of a human group 3 consensus heavy chain construct antibody targeted to TNF-alpha.
                                                                                                                                                                                                                                                                                                                                                                                Preparing a tumor necrosis factor-alpha antibody having a heavy and light chain comprises fermenting a cell mixture, forming a cell pellet and allowing the pellet to stand for a hold time.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                DNA library; humanized antibody; antibody engineering; heavy chain.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an antibody molecule having specificity for human tumour necrosis factor-alpha (TNFalpha) comprising a heavy or light chain. The antibody or the compound comprising the antibody is useful for treating or manufacturing a medicament for treating a pathology mediated by TNFalpha, such as rheumatoid or osteo-arthritis. TNFalpha mediated diseases which can be treated by the antibody include sepsia. Congestive conferences and the sepsia congestive diseases which can be treated by the antibody include sepsia. Congestive diseases syndrome, acquired immunodeficiency syndrome (AlDS), allergies, psoriasis, tuberculosis, inflammatory bone disorders, blood coagulation disorders, bronn's disease and autoimmune diseases, such as thyroiditis. The antibodies may also be used to reduce the side effects associated with TNFalpha generation during neoplasty therapy, to eliminate or reduce shock-related symptom associated with the treatment or prevention of great rejection by use of an anti-lymphocyte antibody, for treating multice organ failure, or in the diagnosis and imaging of disease states involving elevated levels of TNF alpha. The present sequence is human involved the control of the control
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New antibody specific for human tumor necrosis factor (TNF)-alpha, useful for treating TNF-alpha-mediated diseases, e.g. congestive heart failure, septic or endotoxic shock, cachexia, adult respiratory distress syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human group 3 consensus heavy chain framework region peptide - SEQ 106.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 involving elevated levels of TNF alpha. The present sequence is human group 3 consensus peptide used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

New library of nucleic acid sequences comprises nucleotide sequences encoding humanized heavy chain variable regions and humanized light chain variable regions, useful for producing humanized antibodies.
                                                                                                                                                                                                                  The invention comprises a library of nucleotide sequences encoding humanized antibody heavy chain variable regions and humanized antibody light chain variable regions. The library of the invention is useful for producing humanized antibodies, or for re-engineering or reshaping an antibody from a first species for use in a second species. The present amino acid sequence represents a human germline heavy chain framework peptide.
                                                                                                                                                                        Disclosure; SEQ ID NO 216; 179pp; English.

   Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                              April 25, 2006, 06:25:05; Search time 33.7264 Seconds (without alignments) 61.284 Million cell updates/sec
